As a second-year Master's student in Artificial Intelligence and Machine Learning at DTU, I am looking for a student position where I can leverage my skills in deep learning to contribute to innovative, real-world projects.

Education

Technical University of Denmark, MSc Human-Centered Artificial Intelligence	Sept 2025 - July 2027
--	-----------------------

- Double-degree with Centrale Lyon.
- **AI & Machine Learning:** Deep Learning, Advanced Machine Learning, Graph Neural Networks, Bayesian Machine Learning, Multi-Agent Systems.
- **Data Engineering & Computing:** Computational Tools for Data Science, Algorithms for Massive Datasets, Python HPC, Social Graphs.
- **Human-Computer Interaction:** UX Design.

Centrale Lyon, MSc in General Engineering	Sept 2023 – July 2027
--	-----------------------

GPA: 3.92/4 - Completed Core Engineering Program with Highest Honors

- **General Courses:** Mathematics, Physics, Computer Science, Telecommunication, Electronics, Mechanical Engineering, and Economics.
- **Specialization:** Probabilities & Statistics, Genetic Algorithms & Ant Colony Optimization (ACO), Image Sensing and Processing, Machine Learning, Constraint Logic Programming.

Lycée Chateaubriand, Preparatory classes (MPSI-MP*)	Sept 2021 – July 2023
--	-----------------------

- Two-year intensive French program preparing for the competitive entrance exams to top engineering schools.
- Curriculum focused on Advanced Mathematics, Physics, Computer Science, and theoretical rigor.

Experience

Generative AI Intern, NIJI – Rennes, France	Apr 2025 – Aug 2025
--	---------------------

- **Design of an AI-powered Learning Solution:** Led the end-to-end conception of a corporate training tool designed to optimize memory retention and skill acquisition.
- **Neuroscience-based:** Conducted state-of-the-art research on cognitive learning methods to integrate evidence-based educational principles into product features.
- **RAG Implementation:** Leveraged Retrieval-Augmented Generation (RAG) to transform static training repositories into an interactive and searchable knowledge base.
- **Agentic Workflow Automation:** Designed AI agent workflows to automatically generate question banks and assessment materials from existing documentation.
- **Adaptive Learning Algorithm:** Conceptualized a recommendation engine that personalizes learning paths by adjusting question difficulty to the learner's proficiency.

Projects

Diffusion-based sampling for approximate posterior inference, DTU	Sep 2026 - now
--	----------------

- **Bayesian Machine Learning Project Course** throughout the fall semester.

Multi-Agent Path Finding (MAPF) & Cooperative RL, DTU	Feb 2026 - May 2026
• Classical Search (MAPF): Implemented A*, BFS, DFS, and Enhanced Conflict-Based Search (EECBS) to compute optimal and bounded-suboptimal plans in a grid-based Hospital domain. • Deep Reinforcement Learning (DRL): Trained a decentralized agent using Proximal Policy Optimization (PPO) to learn cooperative policies for a multi-agent box-pushing environment.	
Feature alignment for unpaired infrared image translation in the microstructures of composite materials, DTU	Nov 2025 - Dec 2025
• Infrared Super-Resolution: Developed a Cycle-GAN solution (Python, PyTorch) trained on unpaired data to upscale low-resolution sensor outputs into high-fidelity images, reducing hardware costs for experiment monitoring.	
Analysis of the Evolution of Alliances and Polarization in the French National Assembly, DTU	Nov 2025 - Dec 2025
• Graph Theory & Network Analysis: Constructed legislative graphs based on roll-call votes to model political alliances. • Unsupervised Learning: Applied Louvain community detection to identify evolving political blocs and quantify polarization. • NLP & Text Mining: Implemented an adapted TF-IDF approach to characterize the linguistic priorities of each identified community.	
Research Project - State-of-the-art review of Transformer architecture in AI, Liris Laboratory & Centrale Lyon	Oct 2024 - Apr 2025
• Theoretical Research: Conducted a comprehensive state-of-the-art review of Transformer models and authored a technical report on ethical challenges. • Practical Implementation: Built a Seq2Seq Transformer model from scratch, fine-tuned a BERT model, and developed a RAG system using Mistral-7B.	
Study Project - Modeling wildfire behavior and crowd dynamics, Centrale Lyon	Oct 2023 - May 2024
• Simulation & Leadership: Led a team of 6 to develop a computational simulation model for wildfire behavior and crowd dynamics. Awarded the Francis Leboeuf Prize for Best Project (2023).	

Skills

Programming Languages: Python, Matlab, SQL, Prolog, C++ (Basics).

Deep Learning & Computer Vision: PyTorch, TensorFlow, OpenCV, NumPy, SciPy, Scikit-learn, Hugging Face.

Tools & Platforms: Git, GitHub, Streamlit, Figma, HPC (Remote Supercomputing).

Languages: French (Native), English (C1).
